Hiring Manager
At Your Company

Dear Hiring Manager,

I am excited to apply for the Software Engineering Intern role at your company. As a B.Tech student in Electronics and Communication Engineering at IIIT Una, I have built a strong foundation in software development with a focus on Android, full-stack projects, and problem solving through data structures and algorithms.

During my internship at SR Fusion Tech, I engineered the core functionality of an Android security application, integrating PIN, biometric, and facial recognition authentication. I also enhanced a custom pattern lock library, boosting engagement and security, and integrated a payment gateway for seamless transactions. Beyond internships, I have developed impactful projects such as **InfoBooster**, a news application built with Kotlin and Jetpack Compose, and a **full-stack restaurant management system** using Node.js, Express.js, MongoDB, and React.js. These experiences strengthened my ability to design scalable applications and collaborate effectively in team settings.

With over 400 coding problems solved on LeetCode and GeeksforGeeks, as well as contributions to open-source repositories with 10k+ stars, I bring strong analytical and coding skills. I am eager to leverage my technical expertise and passion for problem solving to contribute to your team's success, while continuing to grow as an engineer.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills and experiences align with your company's needs.

Sincerely,
Yogesh Jindal
